LABORATORY REPORT (ORIGINAL)

DIAMOND REPORT

This report is a statement of the diamond's identity and grade including all relevant information about the submitted stone.

ANTWERP, February 23, 2000

TO WHOM IT MAY CONCERN.

The symbols do not usually reflect the size of the characteristics.
Red symbols indicate internal characteristics.
Green symbols indicate external characteristics.

The gemmological analysis of diamonds, precious stones and other minerals must be carried out by specialized gemmologists with many years' experience in this field who have a keen sense of the professional code of ethics governing their work as well as a thorough knowledge of crystallographic, optical and physical phenomena.

The identification of the various species and varieties of stones, the distinction between natural and synthetic stones, as well as various tested methods currently encountered are all very important factors. More specifically for diamonds, the laws of refraction and dispersion of light, related geometric data as well as knowledge of all aspects involved in the cutting process are essential.

This gemmological Report is provided upon request of the customer and/or the owner of the gem. By making this Report I.G.I. does not accept purchase or replace the article. Neither I.G.I. nor any member of its staff shall, at any time, be held responsible for any discrepancy which may result from the application of other grading methods. Neither the client nor any purchaser of the gem shall regard this Report as an appraisal or warranty.

This Report is subject to the terms and conditions set forth above and on reverse.
